

LED Retrofit - MB2K

Go Green, Save Green;
Up to \$2000 per year!

LED
Retrofit
MB2K

Florida Plastics is proud to introduce NEW energy efficient LED lighting for use in our MB2K menu system. When introduced over ten years ago, this menu board changed the way the McDonald's system communicated with its audience. With the NEW LED Retrofit, this reliable menu outlet continues to provide quality merchandising while becoming more environmentally friendly and saving you money. In addition to producing cool, evenly distributed light at a fraction of the cost, this cutting edge alternative to fluorescent also requires much less maintenance with regards to bulb / ballast replacement. In all, this equates to an ROI in as little as fifteen months for a standard menu layout.

Benefits

- 60% Energy Savings (compared to fluorescent)
- 14 Month ROI
- Requires No Changing Of Bulbs / Ballasts
- Up To 50,000 Usable Hours
- Does Not Produce Heat (increases life span of POP)
